

SmartHub Diagnostics & DFD Level 0 (Context)

Method: Gane and Sarson DFD notation

State / Define / Justify

State (In this level): SmartHub is represented as one process (P0) with only external entities and top-level flows.

Define (According to): Gane and Sarson define a context diagram as the whole system shown as one process with external interfaces (Gane & Sarson, 1979).

Justify (Moreover): This level gives a clear system scope before internal decomposition, which improves stakeholder understanding.
